**Legal Regulation of New Media as a Factor in Achieving Sustainable
Development Goals**

Objective

To study the current state legislation regulating the activities of online media in countries in different regions of the world in order to identify the most successful practices of legal regulation that contribute to:

- A) media inclusion at all levels of society,
- B) ensuring the safety of citizens in the information environment.

Based on the analysis, formulate the fundamental principles of legal regulation of online media in the global communications system that contribute to the achievement of the goals of sustainable development and well-being of society.

Theoretical significance

This study is designed to deepen knowledge about the impact of legal regulation of online media on the level of digital inclusion, as well as tools for achieving the goals of ensuring the information and psychological security of citizens in the digital age.

Practical significance

The results of the study can be used to develop recommendations for the creation of a legal framework that promotes free and responsible access of citizens to media and information in general, which contributes to the achievement of the goals of harmonious development of society and ensuring the information and psychological security of citizens in the digital media landscape.

Research methodology

- Content analysis of legislative acts.
- Comparative analysis of current regulatory legal acts in the field of new media and information security in countries of different regions of the world.
- Conducting interviews with experts in the field of media law and information security in order to identify best practices and barriers to the development of universal legislation.
